

FIND THE EVIDENCE!

Read the given passage and answer the questions that follow.

Rainforests are one of Earth's most valuable ecosystems, yet they are disappearing at an alarming rate. The destruction of rainforests not only threatens the incredible biodiversity they harbor but also contributes to climate change. It's essential to take action to protect these vital ecosystems that are home to millions of species before it's too late.

1. What is the author's stance on protecting rainforests?

- They are valuable ecosystems that must be preserved.
- They are not important for the environment.
- They should be destroyed to make way for development.

2. Which piece of evidence supports the claim that rainforests are biodiverse ecosystems?

- Rainforests are home to millions of species.
- Rainforests regulate Earth's climate.
- Rainforests are disappearing at an alarming rate.

3. Why should we protect our rainforests?

- Destruction of rainforests will help in development of cities.
- Rainforests are one of Earth's most valuable ecosystems.
- Rainforests are the least valuable ecosystems in the world.
