

# IDENTIFY THE MAIN IDEA

Read the text given below answer the questions that follow.

Did you know that honeybees are amazing insects? They help plants grow by collecting nectar from flowers and spreading pollen. This process is called pollination and is essential for fruits and vegetables to grow.

Honeybees also make something special—honey! They turn the nectar they collect into honey using their beeswax glands. Honey is not only delicious but also has natural antibacterial properties.

Sadly, honeybees face problems like pesticides and losing their homes. It's important for us to protect these busy bees so they can continue their vital work for the environment.
