

PROBLEM AND SOLUTION

Read the given passage. Identify the problem and solution in each case.

For many animals their homes are disappearing due to deforestation. Trees, crucial for their food and shelter, are being cut down. One way is to create wildlife reserves and protected areas where animals can live safely. Another solution is for people to plant more trees and practice sustainable logging to ensure animals have the resources they need to thrive.

Problem

Solution

Soil erosion is a big problem in some areas. The top layer of soil, vital for plant growth, is washed away by heavy rainfall or human activities. This poses a challenge for farmers who need fertile soil for crops. One way is planting cover crops or building terraces on hilly terrain. These measures help hold the soil in place and slow down water flow, preventing excessive erosion and protecting fertile soil for agriculture.
