

# 3-Digit by 2-Digit Division Puzzle

Fill in the numbers in the outer ring by dividing the numbers in the middle ring by the center number.

The puzzle consists of a central circle containing the number  $\div 12$ . Surrounding this is a ring of ten trapezoidal cells, each containing a number: 624, 180, 144, 492, 120, 384, 204, 240, 156, and 132. The outermost ring consists of ten larger trapezoidal cells, all of which are empty for the student to write the result of the division.
