

## 3-Digit by 2-Digit Food Division

Rosco works at a food distribution center, making food packets using a given amount.

Example: 300 candies can be packed in 25 packets with 12 candies in each using the division sentence:  $300 \div 25 = 12$ .

Use the same logic to complete this table:

Item	Quantity	No. of packets	Amount in each packet
Candy Canes	672	24	
Gummy Worms	840		24
Gummy Bears	768	32	
Jelly Beans	594		33
