

## 4-Digit by 2-Digit Food Division

Rosco works at a food distribution center, making food packets using a given amount.

Example: 3000 candies can be packed in 25 packets with 120 candies in each using the division sentence:  $3000 \div 25 = 120$ .

Use the same logic to complete this table:

Item	Quantity	No. of packets	Amount in each packet
Candy Canes	8736	24	
Gummy Worms	6464	32	
Gummy Bears	9072	56	
Jelly Beans	5520	46
