

# Roll-and-Add Unlike Fractions

Roll a dice twice to get two fractions as per the given key.  
Find their sum and write it in the standard form.

## First Roll

					
$\frac{4}{10}$	$\frac{3}{5}$	$\frac{1}{2}$	$\frac{1}{4}$	$\frac{3}{4}$	$\frac{2}{7}$

## Second Roll

					
$\frac{1}{6}$	$\frac{7}{8}$	$\frac{10}{12}$	$\frac{2}{3}$	$\frac{1}{3}$	$\frac{5}{9}$

Example

First Roll:   $\rightarrow \frac{3}{5}$

Second Roll:   $\rightarrow \frac{2}{3}$

$$\frac{3}{5} + \frac{2}{3} = \frac{3 \times 3}{5 \times 3} + \frac{2 \times 5}{3 \times 5} = \frac{9}{15} + \frac{10}{15} = \frac{19}{15} = 1 \frac{4}{15}$$

First Roll:

Second Roll:

$$\frac{\square}{\square} + \frac{\square}{\square} = \square$$

First Roll:

Second Roll:

$$\frac{\square}{\square} + \frac{\square}{\square} = \square$$
