

Subtract Unlike Fractions and Mixed Numbers

Fill the blanks with the numbers that solve the subtraction expression correctly. Take help of the solved example.

$$\boxed{3} \frac{\boxed{1}}{\boxed{6}} - \frac{\boxed{4}}{\boxed{5}} = \boxed{} + \frac{\boxed{}}{\boxed{}} - \frac{\boxed{}}{\boxed{}}$$

$$= \boxed{} \frac{\boxed{}}{\boxed{}}$$

$$\boxed{6} \frac{\boxed{1}}{\boxed{8}} - \frac{\boxed{7}}{\boxed{9}} = \boxed{} + \frac{\boxed{}}{\boxed{}} - \frac{\boxed{}}{\boxed{}}$$

$$= \boxed{} \frac{\boxed{}}{\boxed{}}$$
