

Subtracting Unlike Fractions

Shade the model to represent the first fraction and cross out the second fraction to find their difference.

$$\frac{1}{2} - \frac{1}{4} = \frac{\square}{\square}$$

$$\frac{1}{3} - \frac{1}{6} = \frac{\square}{\square}$$

$$\frac{2}{3} - \frac{4}{9} = \frac{\square}{\square}$$
