

## Subtract Unlike Fractions and Mixed Numbers

Fill the blanks with the numbers that solve the subtraction expression correctly. Take help of the solved example.

$$\begin{array}{c} \boxed{3} \end{array} \frac{\boxed{1}}{\boxed{2}} - \frac{\boxed{2}}{\boxed{3}} = \boxed{\phantom{00}} + \frac{\boxed{\phantom{00}}}{\boxed{\phantom{00}}} - \frac{\boxed{\phantom{00}}}{\boxed{\phantom{00}}}$$

$$= \boxed{\phantom{00}} \frac{\boxed{\phantom{00}}}{\boxed{\phantom{00}}}$$

$$\begin{array}{c} \boxed{5} \end{array} \frac{\boxed{2}}{\boxed{7}} - \frac{\boxed{3}}{\boxed{6}} = \boxed{\phantom{00}} + \frac{\boxed{\phantom{00}}}{\boxed{\phantom{00}}} - \frac{\boxed{\phantom{00}}}{\boxed{\phantom{00}}}$$

$$= \boxed{\phantom{00}} \frac{\boxed{\phantom{00}}}{\boxed{\phantom{00}}}$$
